

Codaflex

Continuous printing

A flexographic printing unit for continuous marking on various materials such as cardboard, plastic film, textiles, shaped goods, metal, carpet, flooring, etc...

For a constant printing quality for speeds from 1mtr to more than 150mtr/min

Model

Codaflex 50

Codaflex 100

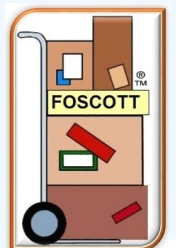

Print Length
537mm

Print Height
50mm-14ribs
100mm-28ribs

Installation

The codaflex is easily mounted into the production line above the product. The printer is driven by frictional contact between the rubber tyres on the type drum, and the material, by a synchronous transmission with gearing and timing belt for optimum marking quality even at high speeds.

The system maintains the device horizontally during marking, while guaranteeing an optimum level of ink in the ink tank.

Cartridge Inks

Uses a valve type sealed ink cartridge 500ml with fast drying ink., easily interchangeable. The adjustment of the ink volume is very precise. The wave proof bottom of the ink tank removes all risks of ink overflow or ink projection. The marking quality is guaranteed by the very precise calibration of the ink film, provided by the adjustable scraper and the fine precision laser-engraved ceramic transfer roller. The detachable ink tank and the transfer roller are easily removed for cleaning.

Fast drying dye ink for high speed non porous material

CF901N - Black

CF902N - Red

CF904N - Blue

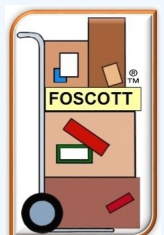

CF009N Ethanol Cleaner

An option of a cleaning kit includes a spray, brush, small nylon brush, steel brush and a special pin will allow you to clean your Codaflex and keep equipment in the best condition.

Print / Logos

Print from customised logos or from Baselock character sets available in many styles, easily attached on the ribbed drum wheel.
